How to Use Archimedes

Welcome to Archimedes! Our platform is designed to help you navigate the stock market with clear insights, intuitive tools, and reliable data. Here's a quick guide on how to make the most out of Archimedes.

1. Home Page: Your Stock Dashboard

The **Home Page** is where you'll find an overview of the stock market and top insights:

- **Top Rated and Best Performing Stocks**: At a glance, you'll see stocks with the highest overall ratings and the best recent performance. These are updated regularly based on Archimedes' unique rating metrics.
- **Featured Stocks**: We handpick certain stocks that are worth checking out. These selections offer a mix of high performance, solid growth, and value potential.
- **News Articles**: Stay updated with relevant market news. The Home Page features general news articles covering important financial events, trends, and market shifts. To explore more news, visit the **News Section** for a wider selection of articles.
- **Charts and Graphs**: Each featured stock is accompanied by visual data, including performance charts and other relevant graphs, providing a quick overview of how the stock is doing.

2. Analyzing Individual Stocks

When you search for a stock, you'll see an in-depth overview with essential metrics:

- **Overall Score out of 10**: This score is a single, simplified metric to help assess a stock's potential. It's calculated based on fundamental financial data, including growth, value, and performance metrics.
  Important Note: This score is derived from financial data and reflects a stock's fundamentals. However, unexpected events—such as scandals or breaking news—can impact a stock's short-term performance, even if its financial data remains solid. For this reason, **Archimedes is most effective for long-term analysis** (typically over 6 months or more), allowing you to observe the company's sustained performance beyond short-term fluctuations.
- **News and Financial Insights**: For each stock you look up, Archimedes provides relevant news articles, giving you context on market factors or events that could influence the stock's performance.

3. Building Your Customizable Watchlist

On Archimedes, you can create a **personalized watchlist** to track your favorite stocks:

- **Adding Stocks to Your Watchlist**: From the Stocks page, simply click “Add to Watchlist” to save any stock you want to monitor.
- **Watchlist Insights**: Your watchlist includes charts, graphs, and recent performance data for each stock, giving you a comprehensive view of your tracked investments.
- **News Updates for Watchlist Stocks**: Under each stock in your watchlist, you’ll see relevant news articles tailored to your selections. This helps you stay informed about any significant developments affecting the stocks you follow.

4. Headlines

The **Headlines** is a dedicated page with a broader collection of financial news articles. This is your go-to resource for understanding market trends, industry changes, and macroeconomic factors that might influence your investment strategy.

5. Long-Term Usage Tips

While Archimedes provides data-driven insights, it’s best to use our platform for a long-term perspective. **Review your watchlist and stock scores over extended periods, such as six months or more,** to better understand a stock’s true performance and potential.
